

# BIOLOGICAL THERAPY OF CANCER

# 12

## CONTENTS

<b>1. Introduction</b> .....	<b>561</b>
<b>2. Monoclonal Antibodies against Cancer Cells</b> .....	<b>562</b>
2.1. mAbs Targeting Specific Antigens .....	564
2.2. Specific Immunomodulatory mAbs .....	566
2.3. Bispecific Antibodies .....	569
<b>3. Cancer Immunotherapy: General Aspects</b> .....	<b>570</b>
3.1. Regulatory T Cells .....	571
3.2. Myeloid-Derived Suppressor Cells .....	572
3.3. Toll-like and NOD2 Receptors .....	573
<b>4. Cancer Vaccines</b> .....	<b>575</b>
4.1. Tumor Cell Vaccines and Vaccination Antigens .....	575
4.2. DNA and RNA Cancer Vaccines .....	576
4.3. Carbohydrate Vaccines .....	577
4.4. Peptide Vaccines .....	579
4.5. Telomerase-Targeted Vaccines .....	581
4.6. Vaccines against Oncogenic Viruses .....	582
<b>5. Gene Therapy</b> .....	<b>582</b>
5.1. Replacement of Deficient or Absent Tumor Suppressor Genes: Oncolytic Viruses .....	583
5.2. Gene Transfer (Suicide Gene) Therapy .....	584
5.3. Transfer of Resistance Genes for Chemoprotection of Hematopoietic Stem/Progenitor Cells .....	585
5.4. Immunomodulatory Gene Therapy .....	585
<b>6. Antisense Oligonucleotides in Cancer Treatment</b> .....	<b>587</b>
<b>7. Bacteria and Bacterial Toxins in Cancer Therapy</b> .....	<b>589</b>
<b>References</b> .....	<b>589</b>

## 1 INTRODUCTION

This chapter focuses on the medicinal chemistry aspects of biological approaches to cancer therapy—that is, the use of living organisms or substances derived from them (including synthetic versions of such
