

# TOXICOPROTEOMICS: PRECLINICAL STUDIES

B. ALEX MERRICK AND MARIBEL E. BRUNO

*National Center for Toxicogenomics, National Institute of Environmental Health Sciences,  
Research Triangle Park, North Carolina*

## Contents

- 1 Introduction
- 2 The Field of Toxicoproteomics
- 3 Disciplines in Proteomics for Toxicoproteomic Research
- 4 Proteomic Platforms for Toxicoproteomic Studies
  - 4.1 Two-Dimensional Gel Electrophoresis and Mass Spectrometry
  - 4.2 Multidimensional, Quantitative LC-MS/MS: MuDPIT, ICAT, iTRAQ, and SILAC
  - 4.3 Retentate Chromatography–Mass Spectrometry: SELDI
  - 4.4 Protein Capture Arrays: Antibody Arrays
- 5 Toxicoproteomic Studies in Liver Injury
  - 5.1 Acetaminophen
  - 5.2 Carbon Tetrachloride
  - 5.3 Bromobenzene
  - 5.4 Wyeth 14643
  - 5.5 Hydrazine
  - 5.6 Thioacetamide
- 6 New Blood Biomarkers in Liver Injury
- 7 Toxicoproteomic Studies in Kidney Injury
  - 7.1 Cyclosporin A
  - 7.2 Puromycin and Gentamicin
  - 7.3 4-Aminophenol, D-Serine, and Cisplatin
  - 7.4 Dichlorovinyl-L-Cysteine
- 8 Toxicoproteomics of Adverse Effects and Toxicants: Citation Analysis
