

INTERRELATIONSHIP BETWEEN PHARMACOKINETICS AND METABOLISM

JAMES W. PAXTON

The University of Auckland, Auckland, New Zealand

Contents

- 1 Introduction
- 2 Important Pharmacokinetic Parameters
 - 2.1 Systemic Clearance (CL_p)
 - 2.2 Oral Bioavailability (F)
 - 2.3 Volume of Distribution (V)
 - 2.4 Elimination half-life ($T_{1/2}$)
- 3 Approaches to Pharmacokinetic Analysis
 - 3.1 Compartmental Analysis
 - 3.2 Noncompartmental Analysis
 - 3.3 Physiologically Based Analysis
- 4 Predicting Pharmacokinetic Parameters in Humans
 - 4.1 Allometric Scaling
 - 4.2 Microdosing
- 5 Metabolism Features that May Convey Pharmacokinetic Disadvantages
 - 5.1 Nonlinear Pharmacokinetics
 - 5.2 Drug–Drug Interactions
 - 5.3 Polymorphic Drug Metabolism
 - 5.4 Formation of Active/Reactive Metabolites
- 6 Conclusion
- References
