

# METABOLITE PROFILING AND STRUCTURAL IDENTIFICATION

MEHRAN F. MOGHADDAM

*Celgene, San Diego, California*

## Contents

- 1 Introduction
- 2 Why Is Metabolite Profiling Important?
  - 2.1 Biotransformation-Assisted Drug Design and Discovery
  - 2.2 Discovery of Pharmacologically Active Metabolites
  - 2.3 Detection of Toxicologically Active Metabolites
- 3 How Are Metabolites Generated?
- 4 What Are Biotransformation Reactions and How Do They Generate Reactive Metabolites?
- 5 How Are Metabolites Isolated and Identified?
  - 5.1 Mass Spectrometry
  - 5.2 LC/NMR
  - 5.3 Other Analytical Techniques
  - 5.4 Useful Chemical Modification techniques
  - 5.5 A Case Study
- 6 Conclusion
  - Acknowledgments
  - References

## 1 INTRODUCTION

In the pharmaceutical and agrichemical arena, transformation of a compound into its metabolite(s) via *in vivo* or *in vitro* biochemical reactions is referred to as biotransformation reactions. Metabolite profiling refers to the process of identifying
