

# BIODEGRADABLE NANOPARTICLES

SUDHIR S. CHAKRAVARTHI AND DENNIS H. ROBINSON

*University of Nebraska Medical Center, College of Pharmacy, Omaha, Nebraska*

## Contents

- 1 Introduction
  - 1.1 Classification of Nanoparticles
- 2 Natural Biodegradable Polymeric Nanoparticles
  - 2.1 Physical Properties of Natural Polymers and Methods Used to Prepare Nanoparticles
  - 2.2 Drug Delivery Applications and Biological Fate of Natural Polymeric Nanoparticles
- 3 Synthetic Biodegradable Polymeric Nanoparticles
  - 3.1 Synthetic Polymers: Physical Properties and Methods of Preparation of Nanoparticles
  - 3.2 Drug Delivery Applications and Biological Fate of Synthetic Biodegradable Polymers
- 4 Thermosensitive and pH-Sensitive Nanoparticles
  - 4.1 Physical Properties and Methods of Preparation
  - 4.2 Drug Delivery Applications and Biological Fate of Thermosensitive and pH-Sensitive Nanoparticles
- 5 Applications of Biodegradable Nanoparticles Other Than Drug Delivery
- 6 Physicochemical Characterization of Polymeric Nanoparticles
  - 6.1 Molecular Weight
  - 6.2 Hydrophobicity
  - 6.3 Glass Transition Temperature
  - 6.4 Particle Size and Particle Size Distribution
  - 6.5 Surface Charge and Zeta Potential
  - 6.6 Surface Hydrophilicity
  - 6.7 Drug Loading and Encapsulation Efficiency
  - 6.8 Drug Release
  - 6.9 Physical Stability of Polymeric Nanoparticles
- 7 Targeting Nanoparticles by Surface Conjugation with Ligands
