

NASAL DELIVERY OF PEPTIDE AND NONPEPTIDE DRUGS

CHANDAN THOMAS AND FAKHRUL AHSAN

Texas Tech University Health Sciences Center, Amarillo, Texas

Contents

- 1 Introduction
- 2 Nasal Anatomy and Physiology
 - 2.1 Structure of Nasal and Olfactory Mucosa
 - 2.2 Nasal Vasculature
 - 2.3 Enzymes and pH
- 3 Factors Influencing Nasal Drug Absorption
 - 3.1 Physiological Factors
 - 3.2 Nasal Mucociliary Clearance
 - 3.3 Pathological Condition of Nose
 - 3.4 Dose Volume and Site of Deposition
 - 3.5 Physicochemical Properties of Drugs
 - 3.6 Type of Delivery Device
- 4 Animal Models for Nasal Absorption Studies
- 5 Enhancement of Intranasal Drug Absorption
- 6 Nasal Delivery of Peptide and High-Molecular Weight Drugs
 - 6.1 Insulin
 - 6.2 Calcitonin
 - 6.3 Low-Molecular-Weight Heparins
 - 6.4 Azetirelin
 - 6.5 Growth Hormones
- 7 Nasal Delivery of Nonpeptide Molecules
 - 7.1 Morphine
 - 7.2 Benzodiazepines
 - 7.3 Buprenorphine
 - 7.4 Hydralazine
 - 7.5 Nitroglycerin
 - 7.6 Propranolol and Other β -Adrenergic Blocking Agents
 - 7.7 Sex hormones
