

PHARMACEUTICAL PREFORMULATION: PHYSICOCHEMICAL PROPERTIES OF EXCIPIENTS AND POWDERS AND TABLET CHARACTERIZATION

BEOM-JIN LEE

Kangwon National University, Chuncheon, Korea

Contents

- 1 Introduction
- 2 Selection of Pharmaceutical Excipients
 - 2.1 Definitions and Goals
 - 2.2 Types of Pharmaceutical Excipients
 - 2.3 Characteristics of Pharmaceutical Excipients
 - 2.4 Selection Guideline of Pharmaceutical Excipients in Tablet Formulation
- 3 Drug–Excipient Compatibility
 - 3.1 Experimental Studies for Drug–Excipient Compatibility
 - 3.2 Analytical Methods for Drug–Excipient Compatibility
 - 3.3 Reaction Types and Stabilization Guidelines
- 4 Powder Characteristics
 - 4.1 Crystal Form and Habit
 - 4.2 Particle Size Distribution
 - 4.3 Flow Characteristics
 - 4.4 Density and Bulkiness
 - 4.5 Hygroscopicity
 - 4.6 Mixing
 - 4.7 Particle Size Reduction (Micronization and Milling)
 - 4.8 Compaction (Compressibility)
 - 4.9 Surface Area and Other Properties
- 5 Tablet Characterization
 - 5.1 Disintegration
 - 5.2 Dissolution
