

# TABLET DESIGN

EDDY CASTELLANOS GIL,<sup>1,2,3</sup> ISIDORO CARABALLO,<sup>2</sup> AND  
BERNARD BATAILLE<sup>3</sup>

<sup>1</sup>*Center of Pharmaceutical Chemistry and University of Havana, Havana, Cuba*

<sup>2</sup>*University of Sevilla, Seville, Spain*

<sup>3</sup>*University of Montpellier 1, Montpellier, France*

## Contents

- 1 Introduction
- 2 Tableting Cycle
- 3 Limitations for Direct Compression
- 4 Previous Granulation: Biopharmaceutical Versus Technological Properties
- 5 Tablet Design for Matrix System
  - 5.1 Controlled-Release Tablet by Direct Compression and Wet Granulation
- 6 Tablet Design with Natural Products
  - 6.1 Tablet Design from Aqueous Plant Extract
  - 6.2 Natural Product as Vehicle for Manufactured Tablets
  - 6.3 Natural Product as Vehicle for Controlled-Release System
  - 6.4 Mechanism of Soluble Principle Active Propranolol Hydrochloride and Lobenzarit Disodium from Dextran Tablets
- 7 Design Tools of Tablet Formulation
  - 7.1 MODDE 4.0
  - 7.2 iTAB
  - 7.3 Percolation Theory
  - 7.4 Artificial Neural Networks
- 8 Coating Systems
  - 8.1 Subcoating of Tablet Cores as a Barrier to Water
  - 8.2 Kollidon VA 64
  - 8.3 SEPIFILM
- 9 Development of Pharmaceutical Tablets Using Percolation Theory
  - 9.1 Case Study: Optimization of Inert Matrix Tablets for Controlled Release of Dextromethorphan Hydrobromide
  - 9.2 Critical Points of Hydrophilic Matrix Tablets
