Contents

- 1 Introduction
- 2 *In Vitro* Biological Systems to Catalyze Metabolism
 - 2.1 Metabolic Competence of the *In Vitro* System
 - 2.2 From Recombinants to Perfusions
 - 2.3 Current Types and Components of *In Vitro* Systems
 - 2.4 Measuring Induction Potential *In Vitro*
 - 2.5 Species Considerations
- 3 Assignment of Metabolizing Enzymes
 - 3.1 Affinity (Inhibition) Studies
 - 3.2 Enzyme-Selective Substrates, Inhibitors, and Antibodies
 - 3.3 Recombinant Enzymes
 - 3.4 Enzyme Kinetic Characterization of Principal Metabolic Reactions
- 4 Identification and Quantification of Metabolites
 - 4.1 First Incubations—Tentative Identification of Metabolites
 - 4.2 Absolute Structures—Reference Metabolites and NMR Studies
 - 4.3 Quantitative Studies
 - 4.4 Requirements for Analytical Instrumentation
