

***IN VITRO* TOXICOKINETICS AND DYNAMICS: MODELING AND INTERPRETATION OF TOXICITY DATA**

ARIE BRUININK

Materials–Biology Interactions, Materials Science & Technology (EMPA), St. Gallen, Switzerland

Contents

- 1 Introduction
 - 2 Benchmark Dose
 - 3 Toxicokinetics *In Vivo*
 - 4 Basics of *In Vitro* Toxicodynamics
 - 4.1 Test Substance Binds Predominantly to One Important Effectual Cell Protein
 - 4.2 Test Substance Binds to Two Important Effectual Proteins with Different Affinities
 - 4.3 Test Substance Binds to Many Important Effectual Proteins with Approximately Equal Affinity
 - 5 Rationale Describing *In Vitro* Toxicokinetics and Dynamics and Aim of the Present Study
 - 6 *In Vitro* Toxicokinetics and Dynamics
 - 6.1 Effects Based on Peak Concentrations (One-Compartment Models)
 - 6.2 Effects Based on Accumulation (Two-Compartment Models)
 - 7 Concluding Remarks Regarding the Eight Models of Toxicity and the Discrimination Between Them
- Acknowledgment
