

PROTEOMICS

JUAN CASADO AND J. IGNACIO CASAL

Spanish National Cancer Center (CNIO), Madrid, Spain

Contents

- 1 Introduction
- 2 Protein Extraction and Purification
 - 2.1 Disruption of Tissues and Solubilization of Proteins
 - 2.2 Depletion of Abundant Proteins
- 3 Two-Dimensional Polyacrylamide Gel Electrophoresis
 - 3.1 Protein Sample Preparation
 - 3.2 First Dimension: Isoelectrofocusing
 - 3.3 Second Dimension: Polyacrylamide Gel Electrophoresis—Choice of Gel Size, Concentration, and Protein Molecular Weight Range
- 4 Gel Staining and Image Processing
 - 4.1 Coomassie Brilliant Blue and Silver Staining
 - 4.2 Fluorescent Dyes
 - 4.3 Differential In-Gel Electrophoresis Staining
 - 4.4 Software-Based Image Analysis for Quantification and Comparison of Protein Patterns
 - 4.5 Drawbacks and Limitations of 2D-PAGE
- 5 In-Gel and In-Solution Endoprotease Digestion of Proteins
 - 5.1 Reduction and Alkylation of Proteins
 - 5.2 Trypsin Digestion
 - 5.3 Alternative Proteases
 - 5.4 In-Gel Digestion of Proteins
 - 5.5 In-Solution Digestion of Proteins
- 6 Principles of Mass Spectrometry: Ionization Sources and Different Mass Analyzers
 - 6.1 Matrix Assisted Laser Desorption Ionization–Time of Flight (MALDI-TOF): Spotting on MALDI Plates and Use of Different Matrices
 - 6.2 Acquisition of Peptide Mass Fingerprints (PMFs) for Protein Identification
 - 6.3 Time of Flight–Time of Flight (TOF-TOF) Analysis of Precursor Ions
