

RELATIONSHIP BETWEEN ANIMAL MODELS AND CLINICAL RESEARCH: USING MUCOSITIS AS A PRACTICAL EXAMPLE

RACHEL J. GIBSON, JOANNE M. BOWEN, AND DOROTHY M. K. KEEFE
Royal Adelaide Hospital Cancer Centre, and University of Adelaide, Adelaide, South Australia

Contents

- 1 General History of the Use of Animal Models
- 2 Benefits of Animal Models in Mucositis Research
 - 2.1 Oral Mucositis Animal Models
 - 2.2 Gastrointestinal Animal Models
- 3 Difficulties of Animal Models in Mucositis Research
- 4 The Dark Agouti (DA) Rat Mammary Adenocarcinoma Model of Mucositis
 - 4.1 Choice of Cytotoxic Agent
 - 4.2 Time Course of Small Intestinal Mucositis in the DA Rat Model
 - 4.3 Tumor Bearing Versus Tumor Naive
 - 4.4 Advantages of Our Rat Model of Mucositis
- 5 Generation of Research Question/Avenues for Investigation in the DA Rat Model
- 6 History of Mucositis in Humans
- 7 Use of Potential Antimucotoxics
 - 7.1 Interleukin-11
 - 7.2 Palifermin
 - 7.3 Velafermin
 - 7.4 VSL#3
 - 7.5 Other Potential Antimucotoxics
- 8 Irinotecan: A Special Case?
- 9 Radiotherapy: A New Application for the DA Rat Model of Mucositis
