## Contents

- 1 Introduction
    - 1.1 Drug Distribution
    - 1.2 Effect of Distribution on Drug Action
  - 2 Drug Distribution in Different Compartments
    - 2.1 Distribution Among Plasma/Blood, Tissues, Organs, and Body Fluids
    - 2.2 Volume of Distribution ( $V_D$ )
  - 3 Factors Affecting Drug Distribution
    - 3.1 Rate of Distribution
    - 3.2 Extent of Distribution
    - 3.3 Role of Transporters
    - 3.4 Pharmacogenetic Factors
  - 4 Modifying Drug Distribution
    - 4.1 Alterations in Chemical Structure: Prodrug Design
    - 4.2 Pegylation
    - 4.3 Use of Another Drug to Modify Distribution
    - 4.4 Encapsulation in Delivery Systems
  - 5 Conclusion
- References

## 1 INTRODUCTION

### 1.1 Drug Distribution

Drug distribution refers to the reversible movement of drug from blood to various tissues of the body [1]. Following entry into the systemic circulation, a drug
