

Geissoschizine (120-11)

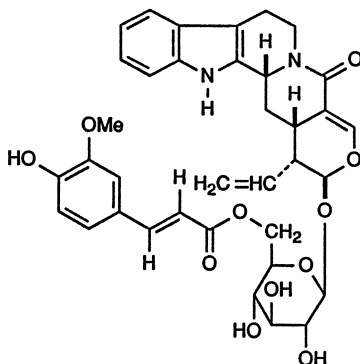

Vallesiachotamine (120-12)

Akuammigine (120-13)

Strictosamide (120-14)

Rhynchophine (120-15)

Further oxindole-type alkaloids isolated from *Uncaria* species are derived from the basic skeleton formosanan (120-16), a pentacyclic system related to corynoxan. They are designated as uncarines A–F and are stereoisomers. The structures, synonyms, and plant origins of the uncarines are listed in Table 120.1.
